

SPEEDCOOKING OVEN INCLUDING A
CONVECTION / BAKE MODE

ABSTRACT OF THE DISCLOSURE

The present invention relates to an oven that includes radiant cooking elements, a microwave cooking element, as well as convection cooking heating elements. The cooking elements are controlled to provide reduced cooking time as compared to known radiant ovens, yet a wide variety of foods can be cooked in the oven. The oven is operable in a speedcooking mode wherein both radiant and microwave cooking elements are utilized, a microwave only cooking mode wherein only the magnetron is utilized, and a convection / bake mode wherein radiant and convection cooking elements are utilized.
